## PCAuthorize® Features

- Support for large number of certified networks
- Supports all major credit card types, private label cards and check guarantee transactions
- Authorize transactions either individually or batched and authorized all together
- Transactions are edited as they are entered with immediate error feedback
- Electronic Draft Capture (EDC) support allows easy draft capture settlement regardless of the method used by the bank network
- Supports additional sale information such as item descriptions, invoice number and customer number, to name a few
- Address Verification Service (AVS) is supported for Mail Order merchants
- Works with magnetic stripe readers and small receipt printers
- Displays totals for batches including outstanding counts, authorized counts, counts by card type, settlement, and discounted totals
- Create, delete, import, export and other transaction/batch management functions
- Supports Dynamic Data Exchange (DDE) / easy access for many other applications
- Prints credit charge slips, transaction detail reports, and batch summaries
- Many functions and setup may be password protected

## Support for Optional Hardware

- Keyboard attached magnetic stripe reader (NOTE: This is not required, but it is recommended that "physical" merchants purchase this due to face to face transaction acceptance)
- Star, Citizen, or compatible serial receipt printer
